ning of each regular issue of the PCT Gazette.

(54) Title: ELECTROLUMINESCENT DEVICE WITH HOMOGENEOUS BRIGHTNESS

(57) Abstract: The invention describes an electroluminescent device equipped with a substrate, a metallic structure and a layer assembly comprising at least a first electrode, an electroluminescent layer and a second electrode. The metallic structure, which is in electrical contact with the first electrode, exhibits a lower layer resistance than the first electrode. Owing to the electrical contact with the first electrode, the layer resistance of the first electrode, and thus the voltage drop over the first electrode, is reduced.
